

SUCCESS STORIES

Aperiomics was able to identify a group of unusual microbes in a patient with decades of painful urinary bladder syndrome. With appropriate treatment she is now feeling better than she has in years, and able to spend more quality time doing activities with family.

"I suffered for a long time and had to sacrifice a lot for my condition. I am thankful for the work Aperiomics did to make sure I got the help I needed." –Beth

After 6 years of misdiagnoses and failed treatments, Aperiomics identified a parasitic whip worm that was causing extreme stomach pain.

"If it wasn't for Aperiomics, we never would have known definitively that it was a parasite nor what type of worm it was. Now he's much better and on the right path to finally being healthy again." –John's Mom

After getting a pacemaker, the surgery site never healed. Doctors were at an impasse – was it autoimmune disorder or infection? Aperiomics testing revealed it was not an infection and proper autoimmune treatment healed him completely.

"As a former lab scientist, I understand that knowing what something isn't can be as important as knowing what it is. Thank you to everyone at Aperiomics for helping us rule out a microbial cause for my dad's condition. Knowing what it wasn't confirmed that he was finally receiving the correct treatment."
–Randolf's daughter

Are You Sick and Don't know Why?

Identifying **every**
known bacteria, virus,
fungus and parasite

APERIOMICS

Why You Should **Get Tested**

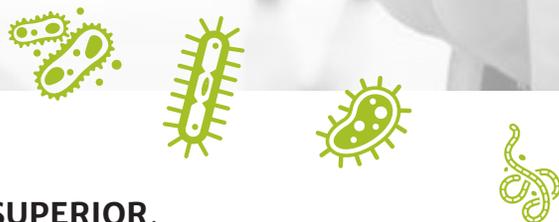

People come to us when they or someone they know is sick.

Often they are desperate for answers, searching for the cause of their illness. We are the *only* company in the world that offers true “all-in-one” testing for known pathogens.

Aperiomics' mission is to change **EVERYTHING** about **How infections are identified.**

We specialize in **Discovering the Unknown™.**

Our goal is to finally get you answers.

SUPERIOR, CUTTING-EDGE TECHNOLOGY

Americans spend over **\$200 billion** per year on medical diagnostic testing! Existing tests use older technology... leading to lost time, wasted money and decades of illness.

Aperiomics can identify every known pathogen in a single test using deep metagenomic sequencing. No other company is using this technology to identify pathogens in patients. This technology has been supported by the National Science Foundation under their Small Business Innovation Research Program.

The complete genetic fingerprint of all known pathogens is generated from samples and our highly accurate, proprietary software is used to analyze these genetic fingerprints. This allows us to identify all known bacteria, virus, fungi and parasites that may be causing infection.

Privacy

Aperiomics is HIPAA compliant and takes great measures to ensure that your personal information and genetic material remain private and secure. Your individual information will never be sold, rented or leased to any third party without your expressed, written consent.

Getting Tested is **Easy**

Talk to Your Doctor

1 Your doctor can help you decide what type of sample(s) should be tested. The best sample is from the source of symptoms. We are happy to speak to your doctor any time.

Get the Kit

2 We send you or your doctor specialized collection kits such as plasma, swab, fecal, urine, tissue, etc.

Collect & Ship the Kit

3 Your doctor oversees collection of your sample(s) and ships to us in our pre-paid package.

Testing

4 We test your sample(s) for all known microorganisms, including pathogenic bacteria, virus, fungi and parasites.

Get Results

5 Your results are sent to your doctor 10-14 days after we receive your sample(s). Your doctor will receive a list of every known bacteria, DNA virus, parasite and fungus was identified in your sample(s), including how much of each.

Doctor Interprets

6 Your doctor interprets the results and determines the appropriate next steps. We provide consultation services to your doctor to help them understand the report. We can also refer them to other healthcare providers if they need additional support to help you.
